👤 Professional Summary

Software Engineer specializing in React Native and React.js with 3+ years of experience building scalable mobile and web applications. Experienced in TypeScript, real-time systems, and modern state management tools such as Zustand and Redux Toolkit. Strong background in building responsive user interfaces, integrating RESTful APIs, and optimizing application performance. Passionate about developing high-quality, scalable software solutions and improving user experience through clean architecture and efficient frontend development.

🎓 Education

BEng (Hons) Software Engineering **Mar 2023 – Sep 2024:** *Esoft Metro Campus, Jaffna* (London Metropolitan University)

HND in Software Engineering (Distinction) **Apr 2021 – Feb 2023:** *Esoft Metro Campus, Jaffna*

⚙️ Technical Skills

- ✓ **Frontend:** React.js, React Native, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS
- ✓ **State Management:** Zustand, Redux Toolkit, React Query, Context API
- ✓ **Mobile Development:** React Native CLI, Expo, SQLite, AsyncStorage
- ✓ **Backend Integration:** RESTful APIs, WebSocket, Socket.io
- ✓ **Performance Optimization:** Rendering Optimization, Component Memoization, Efficient State Updates
- ✓ **Tools:** Git, GitHub, VS Code, Android Studio, Postman
- ✓ **UI/UX:** Responsive Design, Mobile-first UI Design, Figma, Adobe XD
- ✓ **Development Practices:** Agile Development, Component Architecture, Reusable UI Components

🏢 Work Experience

Software Engineer

Apr 2023 – Present: *Invicta Innovation, Jaffna*

- Developed and maintained 3+ production-ready mobile and web applications using React Native and React.js
- Built real-time messaging features using WebSocket supporting scalable communication systems
- Improved application performance by optimizing component rendering and state management (25% improvement)
- Designed reusable UI components that improved development efficiency and UI consistency across projects
- Collaborated with cross-functional teams to debug, optimize, and resolve production issues
- Integrated REST APIs and implemented efficient frontend data handling

📁 Professional Projects

Secure Real-Time Chat Application:

- Developed a WhatsApp-like mobile application using React Native and TypeScript
- Implemented OTP authentication and real-time messaging using WebSocket
- Designed group chat functionality with efficient message synchronization

- Implemented end-to-end encrypted messaging with optimized message processing
- Used Zustand for state management to reduce unnecessary re-renders and improve performance
- Integrated SQLite for offline message storage and faster local data access
- **Tech Stack:** React Native, TypeScript, Zustand, SQLite, WebSocket

HRMS Web Application:

- Built employee management modules with CRUD operations supporting 100+ employee records
- Developed responsive dashboards for employee monitoring and reporting
- Integrated REST APIs for seamless frontend-backend communication
- Implemented reusable UI components to improve development speed and maintainability
- **Tech Stack:** React.js, JavaScript, REST APIs

Hotel Management System – Serendipity Retreats:

- Developed a booking management system supporting multiple hotel properties
- Implemented real-time availability checking and booking restrictions
- Improved UI responsiveness and mobile compatibility across devices
- **Tech Stack:** React.js, JavaScript

★ Personal Projects

- 🔗 **E-Learning Mobile App** — Video courses, quizzes, offline learning
- 🔗 **Food Order Mobile App** — Order tracking and payment integration
- 🔗 **Gym Mobile App** — Workout planning and progress tracking
- 🔗 **Task Management System** — React, Node.js, MongoDB with real-time updates
- 🔗 **Portfolio Website** — React and TypeScript portfolio
